DATA SHEET

Reagent: HIV-1 93BR020.17 gp160 Expression Vector (pSVIII-93BR020.17)

Catalog Number: 3089

Lot Number: 96032

Release Category: D

Provided: 2 µg of dried purified DNA stabilized in DNastable *Plus*

Cloning Site: Envelope was Kpn digested and used to replace Kpn digested HXB2 env in pSVIII.

GenBank: [U27401](#)

Description: This molecular clone of the env gene is part of a panel of multi-subtype molecular envelope clones. Detailed information about the panel can be found in the reference. The clone is derived from a patient in Brazil. PCR-derived HIV-1 gp160 gene from primary PBMC culture was cloned into pSVIIIenv (Kpn). The primary isolate env gene was exchanged into the vector in place of the HXB2 env gene, and used in a single round CAT-based virus infectivity assay.

Special Characteristics: [Sequence file lot 96032](#)
This reagent is currently being provided as dried purified DNA stabilized in DNastable *Plus*. Please see the notice for additional information and the protocol for reconstitution of dried DNA reagents. [Dried DNA Notice](#)

Recommended Storage: Keep the reagent at room temperature in a dry storage cabinet or in a moisture barrier bag.

Contributor: Dr. Feng Gao and Dr. Beatrice Hahn, and the DAIDS, NIAID.

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.
